Hexagon Grid Extension

The Hexagon Grid extension implements an image grid. On hover, each image can display a title and description. This image can be linked to another page or trigger a lightbox.

Hexagon Grid can be used in responsive layouts (with breakpoints) or inside a layout grid for full width/flexible layouts.

Online demo:
https://www.wysiwygwebbuilder.com/support/hexagongrid.html

Adding images
Click 'Add' to add a new image. To add multiple images at once, hold down the SHIFT-key on your keyboard while pressing the Add-button.
Each image can have a title, description, link and background color.

Background Color
Specifies the default background color of the content area. You can also give each hexagon item a different background color. This color can be set in the properties of the image.

Opacity
Specifies the opacity of the background color.

Text Color
Specifies the text color.

Scale
Specifies the scaling factor of the hexagon items. This can be used to control the spacing between the images. For example, if you use a scaling factor of 0.98, then the images will be smaller so there will be more space between the images.
The default value is 1.00

Columns
Specifies the number of images in a row. This value is responsive so it can be different in breakpoints. There is also an 'auto' option. In that case, the hexagon grid will use built-in breakpoints.

Text
Specifies the styling of the text in the content area.

Transition
The slider supports two types of transitions: fade and slide. There are also 10 different types of easing.

Lightbox
The gallery also supports lightboxes so when you click an image then a lightbox slideshow will be launched. Most WWB lightbox add-ons are supported:
http://wysiwygwebbuilder.com/lightboxes.html
To customize the behavior of the lightbox, you can add extra options through 'Options'. Please consult the documentation or website of the specific lightbox for more details about possible configuration options.

How to install this extension so it is available in WYSIWYG Web Builder?
You can use the Extension Manager (Menu->Tools->Extension Manager) to install this extension.

Alternatively, you can manually copy all files from the zip file to the Web Builder extensions folder. Usually this folder is in this location:
My Documents\WYSIWYG Web Builder\system\extensions\

Requirements
WYSIWYG Web Builder 15 or higher

License Agreement
This is a commercial extension for WYSIWYG Web Builder.
This extension is not free! To use it on your website you will need to buy a license:
